SUMMARY

Software developer and IT technician with 3.5 years of hands-on IT experience who builds business software that real teams use every day. I take projects from requirements through database design, deployment and ongoing support, across cloud and self-hosted environments, and I repair the hardware they run on. Strongest in Python, JavaScript, React, Django, Node.js and SQL.

EXPERIENCE

Software Developer / Full-Stack Engineer · Independent & Client Projects — 2024 – Present · Bowling Green, KY

- Build complete business applications with clients, from requirements and UI design through database architecture, authentication, deployment, testing and ongoing enhancements.
- Built multiple custom CRM systems with customer management, authentication, file handling, dashboards and responsive interfaces.
- Deploy and maintain apps on Render, Supabase, Cloudflare, Linux, Docker and self-hosted Raspberry Pi infrastructure.

IT Technician / Software & Systems Support · Dispo Tech — 2024 – Present · Bowling Green, KY

- Repaired, configured and prepared 500+ computers and other devices for business use and resale.
- Diagnose and resolve hardware, operating system, networking, storage, memory and software issues, documenting device details and repair status.
- Designed and built the shop's inventory software, Dispodex (below), which the team uses daily.

Student IT Technician · South Warren High School — 2024 – 2026 · Bowling Green, KY

- Two years supporting the school's IT team: troubleshooting and repairing student and staff devices, and resolving hardware, software and network issues.

PROJECTS

Dispodex — inventory system for a computer refurbishing shop — case study ↗

Python · Django · SQLite · JavaScript · Square API · pytest

- Rewrote the shop's PHP tool in Django; it tracks 1,400+ items across six stages with a drag-and-drop board, Excel/CSV exports and Zebra label printing.
- Built two-way Square POS sync through a retrying background job queue and signed webhooks, with nightly reconciliation and verified backups.
- Added conflict-safe autosave and per-item change history, migrated and verified every legacy record and photo, and covered it with 190+ tests.

Regroove — inventory & accounting platform for vintage resellers — github ↗

React · TypeScript · Supabase (Postgres, RLS) · Node.js / Express · eBay API · OpenAI

- Multi-user web app for inventory, sales, expenses and marketplaces, with live eBay listings and orders and a sold-comps research tool that estimates resale value before purchase.
- Kept secrets server-side behind an Express API, isolated each shop's data with Row-Level Security, and added downloadable CSV/PDF reports (P&L, tax summary, inventory valuation).

CRM Tool — shipped to local businesses — github ↗

JavaScript · Node.js · Supabase · PostgreSQL · REST API

- Designed the schema, REST API and front end for client tracking, job management, invoicing and analytics, used daily by real customers.

SKILLS

Languages	Python, JavaScript, TypeScript, PHP, Java, C, SQL, HTML, CSS
Frameworks	Django, React, Vite, Node.js / Express, REST APIs
Data & infra	PostgreSQL, SQLite, Supabase, Docker, Linux / Ubuntu, Cloudflare, Render, Raspberry Pi, Git / GitHub
Practices	Full-stack development, database design, authentication, deployment, debugging, refactoring, code reviews, performance tuning, working from client requirements
Hardware	Computer repair and diagnostics, networking, Raspberry Pi builds

EDUCATION

Computer & Information Technology — 2026 – Present

SKYCTC (Southcentral Kentucky Community & Technical College)

High School Diploma

South Warren High School · GPA 3.9 unweighted / 4.1 weighted

CERTIFICATIONS

- Python Certification
- HTML/CSS Certification
- Microsoft Workspace Certification
